## Abstracts

Oxygen sensor is an electronic component used to detect the oxygen concentration in the gas, which is commonly found in the exhaust system of automobile engines. Its core function is to detect the oxygen content in the exhaust gas and transmit the signal to the engine control unit (ECU) to adjust the air-fuel mixture ratio, thereby optimizing combustion efficiency, reducing fuel consumption and reducing exhaust emissions. The oxygen sensor aftermarket refers to the oxygen sensor market sold and replaced through non-original channels after the vehicle leaves the factory due to sensor aging, damage or functional failure. This market covers all oxygen sensor products used for repair, replacement or upgrade, mainly serving the automotive repair industry and parts distributors.
