Abstracts

Oxytetracycline dihydrate is a broad-spectrum antibiotic belonging to the tetracycline class, chemically characterized by its dihydrate crystalline structure, which enhances stability and solubility. It functions by inhibiting bacterial protein synthesis, making it effective against a wide range of Gram-positive and Gram-negative bacteria, as well as certain atypical pathogens. Primarily used in veterinary medicine for treating infections in livestock, poultry, and aquaculture, it is also applied in agriculture as a foliar spray to control bacterial diseases in crops. Its applications extend to limited human pharmaceutical uses, though newer antibiotics have largely supplanted it in many regions due to resistance concerns and the development of more advanced therapeutic options.

The global Oxytetracycline Dihydrate market size was estimated at USD 980.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.80% during the forecast period.
