Report Overview

Ozone has strong oxidation performance. Oxygen atoms in ozone molecules have strong electron-philicity or proton-philicity. The decomposition of ozone will generate new ecological oxygen atoms and form hydroxyl radical $\cdot\text{OH}$ with strong oxidation in water to oxidize and decompose pollutants in water. Ozone catalytic oxidation technology is an efficient advanced wastewater treatment technology, which is a hot application in the field of wastewater treatment in recent years. Compared with ozone as a single oxidant, hydroxyl radical ($\cdot\text{OH}$) formed by ozone under the action of catalyst has a higher reaction rate with organic matter, stronger oxidation, almost all organic matter can be oxidized. Catalysts can catalyze ozone to directly oxidize organic matter in water to CO_2 and H_2O , or to oxidize and decompose large organic matter into small molecules, making it easier to degrade.

This report provides a deep insight into the global Ozone Catalyst market covering all its essential aspects.
