Abstracts

An ozone gas decomposer is a device specifically designed to break down excess ozone gas in the air. In ozone generators or ozone application systems, residual ozone can remain in the gas stream after usage, and excess ozone can pose risks to the environment and human health. The ozone gas decomposer safely and effectively decomposes the excess ozone in the air, converting it into oxygen, thereby preventing ozone leakage and environmental contamination.

The global Ozone Gas Decomposers market size was estimated at USD 198.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.30% during the forecast period.
