Abstracts

Ozone water decomposers are devices used to treat ozonated water by chemically or physically decomposing the ozone into oxygen and water. Ozone has strong oxidizing properties in water, which allows it to remove harmful substances, bacteria, and viruses. However, ozone itself can be hazardous to the environment and human health, so decomposers are used to reduce ozone concentrations to safe levels.

The global Ozone Water Decomposers market size was estimated at USD 68.7 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
