Abstracts

Point to point antennas (P2P) are used between two endpoints. To support bidirectional traffic flow, these nodes use either frequency division multiplexing or time-division multiplexing. For fixed links, high gain directional antennas are used over long ranges. Point to point or P2P radios are often used in remote or rural environments. 5G networks require the dense deployment of small cells and base stations, creating a need for reliable and efficient point-to-point communication between these network elements. P2P antennas have emerged as a vital component in 5G infrastructure, enabling high-speed data transmission between base stations, small cells, and other network devices.

The global P2P Antennas market size was estimated at USD 4139.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.10% during the forecast period.
