Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on PAC Flocculant Dosing Device competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, the global production of PAC flocculant dosing devices reached 167,000 units, with an average selling price of US\$5,410 per unit. A PAC flocculant dosing device is an integrated system that dissolves, dilutes, and matures solid (powder or granules) or liquid PAC (polyaluminum chloride) flocculant at a set concentration, and then precisely adds it to the water to be treated via a metering pump. The PAC flocculant dosing system mainly consists of a solution tank, a mixing tank (with agitator), a metering pump, a level gauge, an electrical control cabinet, pipelines, valves, safety valves, check valves, pressure gauges, filters, a base, and a ladder. Utilizing the neutralization and adsorption bridging effects of PAC, it destabilizes and aggregates tiny suspended particles and colloidal substances in water, forming easily separable flocs. It is applied in municipal water supply and drainage, industrial wastewater (papermaking, textile printing and dyeing, chemical, food and beverage, steel mining coal preparation/tailings return water), sludge dewatering pre-dosing, circulating cooling, and greywater reuse. Upstream components include PAC chemicals and additives, metering pumps and motors, agitators/feeders and humidifiers, sensors and valves, etc.; downstream applications include municipal water departments and various industrial sectors requiring water treatment, such as petroleum, chemical, papermaking, food, and mining. The industry's gross profit margin is approximately 20-30%.

The global PAC Flocculant Dosing Device market size was estimated at USD 903.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of

5.40% during the forecast period.
