Report Overview

Cardiac devices such as pacemakers and implantable cardioverter defibrillators (ICDs) have been able to treat slow heart rhythm as well as dangerous rapid heart rhythms. However, infections in the control units or leads of such devices could be life threatening as leads are positioned in the blood vessels that direct to the heart. This is one of the main reasons influencing the use of pacemaker/defibrillators lead extraction kits. Considerable increase in the risk of cardiac devices for the patient or need to have control units extracted after several years are likely to be attributed to the development of pacemaker/defibrillators lead extraction kits market.
