Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Package-on-Package (PoP) Solder Paste competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Package-on-Package (PoP) solder paste is a soldering material used in stacked packaging technology, especially for stacking multiple chip packages together to achieve higher density integration. PoP solder paste is commonly used in consumer electronics products such as smartphones, tablets, and IoT devices, which can effectively save space and improve performance. In the assembly of stacked package (PoP), solder paste is usually printed onto the substrate first, and then the logic chip is placed on the solder paste. After immersing the packaged memory in a dedicated stacked package (PoP) flux or solder paste, place it on top of the logic chip. Then reflow the entire component. The entire process adopts a no wash process.

The global Package-on-Package (PoP) Solder Paste market size was estimated at USD 163.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.30% during the forecast period.
