Report Overview

Package substrates are critical components in semiconductor packaging, serving as the physical foundation that connects integrated circuits (ICs) to printed circuit boards (PCBs). These substrates provide electrical interconnections, thermal dissipation, and mechanical support for ICs, ensuring reliable performance in electronic devices. They are typically made of organic materials (e.g., epoxy-based laminates) or inorganic materials (e.g., ceramic or silicon), with advanced options incorporating high-density interconnect (HDI) and fine-pitch designs to meet the demands of modern high-performance computing, 5G, AI, and IoT applications. The growing complexity of semiconductor packaging, driven by miniaturization and multi-chip integration, has increased the demand for advanced substrates such as flip-chip, wafer-level, and fan-out variants. Key market drivers include the expansion of smartphones, automotive electronics, data centers, and wearable devices, while challenges involve material costs, supply chain constraints, and the need for improved thermal management solutions. Major players in the industry include Ibiden, Shinko Electric, Unimicron, and AT&S, with competition intensifying as chipmakers push for higher-performance packaging technologies.
