Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Packaging for Semi-Solid Dosage Forms competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Semi-solid dosage forms, including creams and ointments, require packaging that is chemically inert and easy for patients to use, ensuring drug safety and convenience. Common packaging options include tubes and jars. Tubes, made from plastic or aluminum, are suitable for creams, ointments, and gels, allowing controlled dispensing and easy handling, often equipped with tamper-evident seals to prevent contamination. Material selection depends on both the drug's composition and its compatibility with the packaging components. Jars, which are wide-mouthed glass or plastic containers, are used to store larger quantities of creams and ointments. While jars offer easier product access, their protective capabilities against contamination are generally lower than those of tubes. In 2024, the global average price of packaging for semi-solid dosage forms was approximately USD 0.22 per unit, with a total sales volume of around 19.36 billion units.

The global Packaging for Semi-Solid Dosage Forms market size was estimated at USD 4259.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.30% during the forecast period.
