### Report Overview

Pallet flow racking is typically used for two different types of applications, for order picking applications. Here we focus on deep lane pallet flow. With deep lane pallet flow involves gravity flow conveyors for pallets. Lanes must have either roll tracks (cheaper, but require better pallet quality) or full width rollers (more expensive, but easier to flow variety of pallet types / qualities). Deep lane pallet flow also requires appropriate in line brakes to prevent runaway pallets. The use of pallet flow racking has the following advantages:

Strict first in first out (first in first out)

-Throughput-It can keep pace with large-capacity palletizers and other production lines.

-Productivity-Eliminate forklift travel time-Pallet runners for transportation
