Abstracts

Palletised mobile robots (PMRs) represent a specialized category of autonomous mobile robots (AMRs) designed to transport standardized pallets, crates, or other unit loads within warehouses, manufacturing facilities, and logistics centers, typically operating without the need for fixed infrastructure like conveyors or guided paths. These systems integrate advanced navigation technologies such as laser-based SLAM (Simultaneous Localization and Mapping), vision systems, or LiDAR to dynamically map and navigate complex environments while avoiding obstacles and optimizing routes. PMRs are increasingly adopted to automate material handling tasks such as moving goods between storage areas, production lines, and loading docks, offering flexibility, scalability, and efficiency improvements over traditional manual or fixed automation solutions. Key functional attributes include payload capacities ranging from several hundred kilograms to multiple tons, compatibility with various pallet types (e.g., EUR, ISO, or custom sizes), and interoperability with warehouse management systems (WMS) or enterprise resource planning (ERP) software for seamless integration into broader supply chain operations.

The global Palletised Mobile Robot market size was estimated at USD 1250.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 12.50% during the forecast period.
