## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Palm based Soap Noodles competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Palm-based Soap Noodles are granular soap base intermediates made primarily from palm oil and palm kernel oil. The core ingredient is sodium fatty acid (a weak anionic surfactant). In 2024, global Palm-based Soap Noodles production reached approximately 1,527.48 Kilotons, with an average global market price of around US\$ 1,212 per tons. The Palm-based Soap Noodles market is driven by health and green trends. Southeast Asian companies dominate the supply chain, leveraging their raw material and process advantages. Functional segments (antibacterial and transparent soaps) and emerging markets (Asia Pacific and Latin America) will be key growth drivers. Companies must balance cost and sustainability certifications to address the dual pressures of environmental regulations and consumer ethical demands. Consumers are increasingly concerned about traditional soaps containing synthetic chemicals (such as sulfates and parabens) and are turning to natural ingredients. Palm-based Soap Noodles, which use sustainable certified raw materials (such as RSPO), are attracting environmentalists. Palm-based Soap Noodles offer high hardness, durability, and a lower price than animal fat soap granules, making them a popular choice for daily chemical companies due to their cost-effectiveness.

The global Palm based Soap Noodles market size was estimated at USD 1851.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.00% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Palm based
