Report Overview

Palm coated gloves are a type of industrial work glove designed to provide enhanced grip, durability, and protection in demanding environments. These gloves feature a coating made from natural or synthetic latex, nitrile, or polyurethane applied to the palm and fingers, offering superior abrasion resistance and friction control while maintaining flexibility. The coating improves grip in wet, oily, or slippery conditions, making them ideal for applications in construction, automotive, oil and gas, warehousing, and manufacturing. Available in various thicknesses and materials, palm coated gloves cater to different levels of protection and dexterity requirements. The market for these gloves is driven by workplace safety regulations, increasing demand for hand protection in hazardous industries, and advancements in coating technologies that enhance comfort and performance. Competitive pricing, customization options, and compliance with international safety standards further influence purchasing decisions.
