Abstracts

Palmitoleic acid, C16:1 Acid, commonly known as Omega-7 fatty acid, has been studied in the scientific community for its potential benefit towards many important health applications including heart health, anti-inflammation, insulin sensitivity, moisture replenishment of mucosal membranes, and anti-aging benefits for skin, hair and nails. Palmitoleic acid is a naturally occurring monounsaturated fatty acid. It is widely found in animal and plant fats, especially in marine fish oil, dairy products and certain vegetable oils. Palmitoleic acid can be produced in the human body through dehydrogenation of palmitic acid. It has biological functions such as anti-inflammatory, improving metabolism and promoting skin health. It is often used in the food, cosmetics and health care products industries. Palmitoleic acid, also known as palmitoleate or (9Z)-hexadecenoate, belongs to the class of organic compounds known as long-chain fatty acids. These are fatty acids with an aliphatic tail that contains between 13 and 21 carbon atoms. Palmitoleic acid is a very hydrophobic molecule, practically insoluble (in water), and relatively neutral. In terms of sales volume, Asia-Pacific is currently the largest consumer market in the world, with a market share of 81.5%, followed by Europe and North America, which account for 8.1% and 7.5% respectively. In terms of product type revenue share, Botanical Source is currently the most widely used in the world, accounting for 79.4%, with market revenue of US\$ 41.1 million. At the same time, in terms of application revenue share, Dietary Supplements application accounted for about 55% , with market revenue of US\$ 28.5 million.

The global Palmitoleic Acid market size was estimated at USD 80.9 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.60% during the forecast period.
