### Report Overview:

Pan-vascular surgical robots are used to treat diseases of blood vessels or related organs in the heart, brain or peripheral vasculature. In panvascular surgery, the surgeon punctures the patient's skin, inserts a needle and then a sheath sequentially into a large blood vessel, and then guides a long, thin guidewire into the blood vessel, eventually reaching a target site in the heart, brain, or peripheral vasculature. Different types of instruments can be placed on the tip of the catheter for different purposes (such as placing an implant or collecting a sample). It is mainly composed of mechanical device and control system, image navigation and force feedback system.
