## Abstracts

Panda-type polarization-maintaining fiber is a specially designed fiber used to maintain the polarization state of optical signals. It gets its name from the black-and-white color of its outer cladding, which resembles a panda's spots, which helps identify the direction of the fiber's polarization axis. With the advancement of laser technology, the demand for panda-type polarization-maintaining fibers in high-power laser applications continues to increase. One of the future development trends is to develop panda-type polarization-maintaining optical fiber with higher power tolerance to meet the needs of industrial and military fields. The development of micro-nano photonics technology will promote the development of panda-type polarization-maintaining optical fiber. Micro-nano photonics devices can be integrated into optical fibers to provide smaller and more flexible optical transmission solutions.

The global Panda Polarization Maintaining Fiber market size was estimated at USD 282.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 11.20% during the forecast period.
