Abstracts

Panel level die bonders are specialized semiconductor manufacturing equipment designed for the assembly of integrated circuits on large-format rectangular panels, as opposed to traditional round wafers or smaller substrates. These systems precisely place and attach semiconductor dies onto panel-based substrates using various bonding techniques?such as epoxy adhesives, eutectic bonding, or thermocompression?enabling higher throughput, reduced material waste, and lower production costs per unit by leveraging the economies of scale offered by panel-level processing. The technology supports advanced packaging applications, including fan-out wafer-level packaging (FOWLP) and heterogeneous integration, aligning with industry trends toward miniaturization, higher I/O density, and improved performance in devices such as smartphones, automotive electronics, and IoT components.

The global Panel Level Die Bonders market size was estimated at USD 95.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.35% during the forecast period.
