Abstracts

Panoramic X-ray systems, also known as orthopantomography (OPG) units, are specialized medical imaging devices designed to capture a single, curved-plane image of the entire maxillofacial region, including the jaws, teeth, sinuses, and temporomandibular joints. These systems operate by rotating an X-ray source and detector around the patient's head in a synchronized motion, producing a two-dimensional panoramic view that offers comprehensive anatomical coverage with relatively low radiation exposure compared to full-mouth intraoral series. Primarily used in dentistry, oral surgery, and orthodontics, panoramic X-rays serve as a foundational diagnostic tool for evaluating dental and skeletal abnormalities, planning treatments such as implants or extractions, and monitoring jaw development or pathology over time.

The global Panoramic X Ray Systems market size was estimated at USD 742.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.80% during the forecast period.
