Report Overview

Pantothenic acid, also known as vitamin B5, is a water-soluble vitamin essential for synthesizing coenzyme A (CoA), which plays a critical role in energy metabolism, fatty acid synthesis, and the production of neurotransmitters, hormones, and hemoglobin. It is widely used in dietary supplements, pharmaceuticals, cosmetics, and animal feed due to its role in supporting cellular function, skin health, and stress response. The market for pantothenic acid is driven by increasing consumer awareness of nutritional health, rising demand for functional food and supplements, and its application in dermatological products for wound healing and anti-aging. Growth is further supported by the expanding animal nutrition sector, where it is added to feed to enhance livestock and poultry health. However, competition from synthetic alternatives, regulatory constraints, and fluctuating raw material costs may pose challenges. Geographically, North America and Europe dominate due to high supplement consumption, while Asia-Pacific is emerging as a key growth region, fueled by rising disposable incomes and healthcare awareness. The market is characterized by innovation in delivery formats (e.g., capsules, powders) and a shift toward plant-based or bioengineered sources to meet clean-label trends.

The global Pantothenic Acid market size was estimated at USD 500.8 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Pantothenic Acid market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights. It examines market size, competitive landscape, emerging
