Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on PAO Base Oil competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. PAO base oil is the most commonly used synthetic lubricant base oil with the widest range of applications. PAO (poly-alpha olefin) is made by polymerization of ethylene to form alpha olefin, which is further polymerized and hydrogenated. It has good viscosity-temperature performance and low-temperature fluidity, and is an ideal base oil for the preparation of high-grade and special lubricants. The core upstream raw materials are C8-C12 linear α -olefins (LAO), represented by 1-octene and 1-decene. These key raw materials are mainly produced through ethylene oligomerization. PAO, with its excellent viscosity-temperature properties, high and low temperature stability, and long service life, has become an indispensable cornerstone of the high-end lubricant market. It is widely used in demanding fields such as automotive (especially high-end engine oils and electric vehicle reducer oils) and industry (such as wind turbine gearboxes and robot lubrication). Global sales volume in 2024 is estimated at 800,000 tons, with an average market price of approximately US\$2,540 per ton. The industry's gross profit margin is expected to be between 15% and 25%. The rapid development of electric vehicles has brought new growth opportunities to PAO (Polydioxanone). The demands of high-end industrial equipment such as wind power and industrial robots for long-life, high-reliability, and adaptability to extreme operating conditions make PAO-based lubricants an irreplaceable choice. The global PAO market exhibits a highly concentrated competitive landscape, with ExxonMobil, INEOS, Chevron Phillips, and Lanxess being the core suppliers of PAO base oils globally. PAO production is closely related to NAO (Natural Oxide) supply. NAO comes from ethylene, which in turn comes from natural gas or oil. Raw material supply and price fluctuations have become major challenges

facing all parties in the industry.

The global PAO Base Oil market size was estimated at USD 2032.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.90% during the forecast period.
