## Abstracts

Paper-based food containers are single-use or multi-use packaging solutions primarily manufactured from paperboard, molded pulp, or other paper-derived materials, often lined or coated with bio-based or plastic barriers to enhance functionality such as grease resistance, liquid retention, and thermal insulation. These containers are widely used across the food service industry for packaging items like takeaway meals, hot and cold beverages, bakery goods, and ready-to-eat foods, offering a more sustainable alternative to purely plastic packaging due to their renewable source material, recyclability, and compostability under appropriate conditions. The market encompasses a diverse range of products including clamshells, cups, bowls, trays, and wraps, designed to meet varying consumer demands for convenience, food safety, and environmental responsibility.
