## Abstracts

A Paper Core Compression Tester is a specialized testing device used to measure the compressive strength or resistance of paper cores, tubes, or rolls. These paper cores are commonly used in industries like packaging, textiles, and printing, where they are integral to holding materials such as paper rolls or film. The test simulates the pressure or load that a paper core might experience during storage, transportation, or handling. The tester applies a force to the paper core, compressing it until it fails, and records the amount of force required to cause the core to collapse or deform. This data helps manufacturers assess the quality, durability, and strength of their paper cores, ensuring they can handle the necessary weight and pressure without failure.

The global Paper Core Compression Testers market size was estimated at USD 126.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.30% during the forecast period.
