Abstracts

Paper Instead of Plastic products are primarily made from fiber materials (such as wood, bagasse, or reeds), supplemented with non-fiber materials (such as solvents and coatings). These materials are then formed through compression molding into a mold. Paper Instead of Plastic products can be made from either virgin pulp or recycled pulp made from recycled waste paper. The advantage of using recycled pulp is that it minimizes the consumption of natural resources and creates a circular production system. From raw material acquisition to waste treatment and remanufacturing, a perfect green cycle is created. Zero-degree draft technology is an emerging film-forming technology for paper-based plastic products. It is currently in its early stages of development, with only a few companies in the Chinese market mastering it. Unlike traditional packaging manufacturing techniques, zero-degree draft technology does not require a mold. While traditional pulp molding uses a draft angle of 3° to 5°, high-end pulp molding can now achieve draft angles below 2°, and technically, even 0° is possible. Zero-degree pull molding uses a specialized multi-molding process and equipment to shape cardboard or pulp at a specific temperature and pressure to create the desired packaging shape, hence the name "zero-degree pull molding." Zero-degree pull molding technology can be applied to packaging of various shapes and sizes, from simple squares to complex three-dimensional packaging. As environmental awareness continues to rise, demand for sustainable development and eco-friendly products is also increasing. Paper-instead-of-plastic-zero-degree-pull-precision-molding environmental products, made from renewable and biodegradable raw materials, meet consumer demand for eco-friendly products and have therefore attracted widespread attention and favor. In terms of draft technology, the current market is dominated by 2-5 degree drafting. Zero-degree drafting technology is in its early stages of development, but it offers significant advantages and represents a breakthrough point in the future market

for paper-instead-of-plastic products. Policy support, downstream demand, and technological advancement are the primary factors driving the development of China's paper-instead-of-plastic-zero-degree-pull-precision-molding environmentally friendly products industry. Technical barriers, talent barriers, funding barriers, fluctuations in raw material prices, and future intensified industry competition are the main obstacles and challenges currently facing the development of China's paper-instead-of-plastic-zero-degree-pull-precision-molding environmentally friendly products industry. Overall, the Paper Instead of Plastic - Zero Degree Pull-Precision Molding Environmental Products industry is currently experiencing rapid growth driven by policies such as the plastic ban, and its future growth prospects are promising. However, the market is currently in its early stages of development, with only a few companies mastering zero-degree draft technology, and the market size remains relatively small. Paper Instead of Plastic - Zero Degree Pull-Precision Molding Environmental Products represents an emerging technology that is distinct from traditional packaging manufacturing. Its core lies in the use of zero-degree draft technology, which eliminates the need for traditional molding molds, thereby reducing material waste and energy consumption during the production process. The Paper Instead of Plastic - Zero Degree Pull-Precision Molding Environmental Products market is currently a blue ocean, in its early stages of development. There are a small number of manufacturers in the industry, and the industry is highly concentrated. While this high degree of monopoly has enabled incumbent companies to quickly capture the market, it also presents challenges for market promotion. Furthermore, market awareness of this emerging environmentally friendly product is still low, and downstream consumer acceptance and consumer awareness need further development.

The global Paper Instead of Plastic-Zero Degree Pull-Precision Molding Environmental Products market size was estimated at USD 86.21 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 9.60% during the forecast period.
