Abstracts

Paper Machine Dryer Fabrics are specialized textile materials engineered for use in the dryer section of paper machines. They play a vital role in the papermaking process by directly interacting with the partially dried paper web. These fabrics are characterized by their high heat resistance to endure the intense heat within the dryer, excellent air permeability for efficient air circulation to promote drying, strong mechanical strength to withstand the forces of tension and abrasion during operation, and a smooth surface to impart a uniform finish to the dried paper. Their proper functioning is essential for achieving optimal drying efficiency and enhancing the quality of the final paper product.

The global Paper Machine Dryer Fabrics market size was estimated at USD 1324.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.10% during the forecast period.
