Abstracts

Paper machine press felts are an integral component in the paper - making process, serving a crucial role in the production of high - quality paper. These felts are placed on the press section of a paper machine, where they interact with the wet paper web. Their primary function is to remove water from the paper web as it passes through the press section. Made from synthetic fibers like polyester or a blend of different materials, they possess a porous structure that allows water to be absorbed and drained away efficiently. This not only speeds up the drying process but also contributes to the overall integrity and smoothness of the paper. Press felts need to be durable, as they endure significant mechanical stress during continuous operation. They must also resist chemical degradation from the various substances present in the papermaking process. Regular maintenance and replacement of paper machine press felts are essential. A well - functioning press felt ensures consistent paper quality, reduces production downtime, and optimizes the overall efficiency of paper manufacturing plants, making it an indispensable element in the paper - making industry.

The global Paper Machine Press Felts market size was estimated at USD 1056.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.20% during the forecast period.
