On a paper machine, the wet end (also called the forming or wire section) is the first part of the machine where pulp in water (stock slurry) is delivered to the headbox and formed into a continuous sheet on the forming fabric, while most of the water is removed. In papermaking, Wet End Management is how you control and optimize everything that happens from stock entering the paper machine until the sheet leaves the forming section ? when the web is still ?wet?. It typically involve monitoring and adjusting factors such as pH, consistency, retention, drainage, and chemical additives to ensure the paper has the desired properties, such as strength, smoothness, and brightness. This process is essential for maintaining efficiency, reducing waste, and improving the overall performance of the papermaking operation.
