Abstracts

Paper strengthening agents are chemical formulations designed to enhance the physical properties of paper, including tensile strength, burst strength, and durability, by reinforcing the hydrogen bonding between cellulose fibers or introducing synthetic polymers. These additives are commonly used in paper recycling processes, where fibers degrade with each reuse, as well as in the production of packaging materials, tissue paper, and specialty papers requiring improved mechanical performance. They can be applied during the pulping stage, surface treatment, or as internal additives, and include substances such as wet-strength resins, dry-strength agents (e.g., starches, polyacrylamides), and natural polymers. The effectiveness of these agents depends on factors like fiber quality, pH levels, and application methods, making them critical for manufacturers aiming to reduce raw material usage, extend product lifespan, or meet specific performance standards in competitive and sustainability-driven markets.

The global Paper Strengthening Agent market size was estimated at USD 220.53 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
