In 2024, global papermaking surface sizing agents production reached approximately 1,564.07 kilotons, with an average global market price of around US\$ 712 per ton. Papermaking surface sizing agents are chemical compounds applied to the surface of paper during the manufacturing process to improve its properties and performance. These agents are designed to enhance the paper's surface strength, reduce its absorbency, and provide resistance to penetration by liquids, such as water or ink. Common types of surface sizing agents include starch, synthetic polymers, and combinations of chemicals tailored to specific paper grades and applications. By controlling the surface characteristics of the paper, sizing agents contribute to improved printability, reduced feathering of ink, and increased resistance to water-based damage. The selection of the appropriate surface sizing agent depends on the desired properties of the final paper product and its intended end-use, such as in printing, packaging, or other applications. Emerging trends towards sustainability present lucrative opportunities for the Papermaking Surface Sizing Agent Market. The shift towards eco-friendly and biodegradable materials is driving innovation in surface sizing formulations. Companies are now focusing on developing natural and sustainable surface sizing agents that align with environmental regulations and consumer preferences. The demand for sustainable packaging solutions is anticipated to increase, with a study from the Paper and Packaging Board indicating that 74% of consumers are willing to pay more for sustainable packaging options. Additionally, advancements in technology are paving the way for the introduction of high-performance sizing agents that can cater to specific customer requirements, thus expanding the market further.

The global Papermaking Surface Sizing Agent market size was estimated at USD 1114.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.80% during the forecast period.
