Abstracts

Para Isobutyl Benzaldehyde (PIBB) is a key synthetic aromatic aldehyde primarily used as a chemical intermediate in the fragrance and flavor industry, where it serves as a precursor for the synthesis of Lilial? (also known as Lysmeral), a widely employed fragrance compound known for its fresh, floral, and slightly aldehyde scent profile reminiscent of lily of the valley. It is characterized by its para-substituted isobutyl group attached to a benzaldehyde core, which imparts specific volatility and olfactory properties, making it particularly valuable in formulating perfumes, personal care products, detergents, and air fresheners. Its chemical structure also lends itself to applications in organic synthesis and specialty chemicals beyond aroma, though these uses remain niche. Regulatory scrutiny concerning certain derivatives, particularly in cosmetics due to allergenic potential, influences its market dynamics, driving demand for compliant alternatives or purified grades.

The global Para Isobutyl Benzaldehyde market size was estimated at USD 120.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.75% during the forecast period.
