Report Overview

The parallel co-rotating twin-screw extruder is a highly versatile and efficient machine utilized in various industrial processes. Unlike the cone co-rotating twin-screw extruder, the parallel design consists of two screws that run parallel to each other within the barrel-shaped housing. These screws rotate at the same speed in the same direction, conveying and mixing materials as they move down the barrel. The parallel configuration allows for increased throughput, higher torque capabilities, and enhanced mixing efficiency. This extruder is widely used in industries such as plastics, rubber, food processing, and pharmaceuticals for compounding, blending, and melt processing applications. Its ability to handle a wide range of materials and provide precise control over product quality makes it a valuable tool in industrial manufacturing.
