Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Parallel F-RAM competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Parallel F-RAM (Ferroelectric Random Access Memory) is a non-volatile memory with a parallel interface that allows multiple data bits (usually 8, 16 or 32 bits) to be transmitted simultaneously through the data bus, enabling high-speed data reading and writing. Parallel F-RAM does not lose data after power failure, and is suitable for scenarios where data persistence is required. Parallel F-RAM also supports nearly unlimited write times (theoretically up to 10^{15} times), which is suitable for frequent write applications.

The global Parallel F-RAM market size was estimated at USD 596.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.50% during the forecast period.
