## Abstracts

A Parametric Test Probe Card is a specialized device used in semiconductor testing to measure the electrical properties of a semiconductor wafer. Unlike traditional probe cards used for functional testing, parametric test probe cards are designed for parametric testing, which focuses on verifying and characterizing the electrical parameters of individual semiconductor devices, such as transistors, diodes, and capacitors, rather than entire integrated circuits. Parametric testing involves evaluating the performance of individual components within a semiconductor device. Probe cards enable this by allowing precise measurements of various electrical parameters, such as voltage, current, and resistance, across different points on the integrated circuit.

The global Parametric Test Probe Cards market size was estimated at USD 124.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.10% during the forecast period.
