Abstracts

Parenteral nutrition means feeding intravenously (through a vein). "Parenteral" means "outside of the digestive tract." Whereas enteral nutrition is delivered through a tube to your stomach or the small intestine, parenteral nutrition bypasses your entire digestive system, from mouth to anus. One of the key factors driving the expansion of the parenteral nutrition market in the present is the rise in metabolic disorders along with chronic diseases like diabetes. The parenteral nutrition industry will expand as a result of the rising rate of malnutrition in the world. Additionally, one of the main factors driving the expansion of the parenteral nutrition market is the ageing population, which is increasing. In addition, rapid modernization, poor dietary intake of a balanced diet, and the rising frequency of chronic diseases all contribute to the need for the parenteral nutrition industry.

The global Parenteral Nutrition Solutions market size was estimated at USD 7476.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.80% during the forecast period.
