Abstracts

Parking payment software is an application based on computer technology and the Internet that is designed to simplify the payment process of parking lots. It allows users to pay parking fees online through mobile devices or computers without using cash or paper money. This software is usually integrated with parking management systems to provide a convenient and fast parking payment experience, reduce waiting time in queues, and improve the operational efficiency of parking lots. The parking payment software market is accelerating with the development of smart cities, and its upstream and downstream ecosystems are maturing. The upstream encompasses license plate recognition systems, payment gateways, sensors, and urban transportation platforms, while the downstream connects parking operators, government transportation departments, commercial real estate, and end users. The deep integration of AI and IoT technologies is enabling parking space prediction and dynamic pricing, while contactless payment methods (such as NFC and license plate recognition) are becoming mainstream. Furthermore, parking systems are integrating with electric vehicle charging stations to create a comprehensive service platform. Data privacy and payment security are becoming increasingly core issues in compliance and technological evolution.
