Abstracts

PARP inhibitors are a group of pharmacological inhibitors of the enzyme poly ADP ribose polymerase (PARP). They are developed for multiple indications; the most important is the treatment of cancer. Several forms of cancer are more dependent on PARP than regular cells, making PARP an attractive target for cancer therapy. PARP inhibitors appear to improve progression-free survival in women with recurrent platinum-sensitive ovarian cancer, as evidenced mainly by olaparib added to conventional treatment. In our report, we only study four approved PARPi (Lynparza, Zejula, Rubraca and Talzenna). One unit is one tablet or one capsule.

The global Parp Poly Adp Ribose Polymerase Inhibitor market size was estimated at USD 5538.81 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.90% during the forecast period.
