Abstracts

Guar beans are a seed of legume called guar which is native to India, and has been eaten there since ancient times. Guar gum is a water-soluble polysaccharide obtained from the endosperm of the guar bean, and reportedly has benefits such as reducing cholesterol and controlling blood glucose levels. But its high viscosity has limited its applications as a food ingredient. Partially Hydrolyzed Guar Gum (PHGG) is a water-soluble dietary fiber made by enzymatically hydrolyzed guar gum and transforming it into a low viscosity substance.
