Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Particle Measurement System competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global particle measurement system production reached approximately 37 k units, with an average global market price of around US\$ 5200 per unit. Particle measurement system is a high-precision instrument used to accurately measure and analyze the concentration, size, shape and distribution of fine particles in air or specific media. The demand for particulate measurement systems is driven by increasingly stringent environmental regulations, industrial process optimization and public health safety. Its core business opportunity lies not only in the upgrading and transformation of CEMS system of traditional industrial chimney, but also in two high-value directions: one is to penetrate into precision industrial fields such as semiconductor manufacturing and lithium battery production, and provide ultra-high sensitivity and online real-time monitoring scheme capable of detecting sub-micron or even nano-particles to control process cleanliness and improve yield; The second is to shift from single hardware sales to providing intelligent management systems integrating sensors, data platforms and early warning functions to help customers achieve predictive maintenance and compliance management, thus building continuous service capabilities and profitability models in emerging markets such as air quality monitoring networks and occupational health. The annual production capacity of a single particle measurement system production line is typically 2,000-3,000 units per year, with a gross profit margin of around 28%. Downstream consumption of particle measurement systems is as follows: industry 25%, environmental 38%, medical 20%, and others 17%.

The global Particle Measurement System market size was estimated at USD 191.0

million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
