Report Overview

Chipboard – also sometimes referred to as Particle Board or Low Density Fibreboard – is made by mixing small wood particles with epoxy resin, which are pressed together under intense heat and pressure to produce a rigid board, typically with a smooth surface. Chipboard is available in a variety of densities to suit different needs and uses, including low, medium and high-density varieties. The lower densities are fairly soft and pliable, while the higher-density chipboards are more rigid and can be used for more heavy-duty applications.
