Abstracts

Partition steel studs refer to a type of light steel stud material specifically designed for constructing interior partition walls in buildings. They are thin - walled steel sections in various shapes such as U - shaped, C - shaped, T - shaped and L - shaped, which are made from galvanized steel strips or thin steel plates through cold bending or stamping. As the framework structure of partition walls, they are used in conjunction with various panel materials such as gypsum boards and fiber cement boards to quickly and efficiently build partition wall systems that divide indoor spaces. They are characterized by light weight, high strength, fire resistance, moisture resistance, good seismic performance, convenient installation and recyclability, meeting the requirements of partition walls for different building functions and environments. Therefore, they are widely used in interior partition wall projects of various buildings.
