Report Overview

A Passenger Boarding Bridge (PBB) (also known as an air bridge, jet bridge, jetway, and sky bridge as well as by other terms) is an enclosed, elevated passageway which extends from an airport terminal gate to an airplane. The PBB allows passengers to board and disembark an aircraft without the requirement to go outside or to be exposed to the elements. Passenger Boarding Bridges can be found in many configurations and may be fixed or movable depending upon the installation.

In its earliest and most basic configuration, a Passenger Boarding Bridge consisted of a fixed platform, which may or may not have been height adjustable, connected to the terminal building by an enclosed bridge. Passenger Boarding Bridges are now, more typically, mobile units which use an articulating mount to fasten them to the terminal at one end and are supported on powered wheels at the other end with the bridge between built as an extendable tube. This arrangement allows the bridge to be retracted and moved out of the aircraft safety zone during aircraft arrival and departure and, once the aircraft is parked and secure, manoeuvred by a trained operator to come in contact with the aircraft at the desired boarding door. These units are height adjustable to allow use with multiple aircraft types.
