Report Overview

Passenger Boarding Stairs provide a mobile means to traverse between the aircraft doors and the ground. Because larger aircraft have door sills 5 to 20 feet high, stairs facilitate safe boarding and deplaning. Smaller units are generally moved by being towed or pushed, while larger units are self-powered. Most models have adjustable height to accommodate various aircraft. Optional features may include canopies, heating, supplementary lighting, and a red carpet for VIP passengers. Larger aircraft may use one or more jet bridges connected to the terminal building for passenger boarding, but ground-based stairs are used when this is unavailable or impractical.

The global Passenger Boarding Stairs market size was estimated at USD 145.40 million in 2023 and is projected to reach USD 193.06 million by 2032, exhibiting a CAGR of 3.20% during the forecast period.
