## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Passenger Car Charging Inlets competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Passenger Car Charging Inlets production reached approximately 30455 K units, with an average global market price of around US\$ 17.8 per unit. Passenger car charging inlets are essential vehicle-side electrical interfaces installed on electric passenger vehicles, designed to receive electrical power from charging stations or connectors and transfer it safely and efficiently to the vehicle's battery system. As a core component of the EV charging architecture, these inlets are typically available in both AC and DC formats to support various charging power levels and scenarios. Charging inlets must offer excellent electrical conductivity, insulation, thermal resistance, mechanical durability, and protection against water and dust, ensuring safe and reliable charging operations. Upstream Raw Materials and Key Suppliers: The production of passenger car charging inlets involves multiple specialized raw materials. Conductive elements are made from high-purity copper or silver-plated copper to ensure low impedance and efficient power transfer. Housing and insulation parts are manufactured using engineering plastics such as PBT, PA66, and PPS, chosen for their flame retardancy, heat resistance, and mechanical strength. Sealing components typically use silicone or thermoplastic elastomers (TPE) to achieve ingress protection ratings of IP55 or higher. Structural metal parts, such as brackets and fasteners, are commonly made from stainless steel or aluminum alloys. Major upstream suppliers include Luoyang Copper and Jintian Copper (copper materials); BASF, DuPont, and DSM (engineering plastics); and Shin-Etsu Chemical, Dow Corning, and Toray (sealing materials). Downstream Applications and Major Customers: Passenger car charging inlets are widely used in electric passenger vehicles, including both battery

electric vehicles (BEVs) and plug-in hybrid electric vehicles (PHEVs). Key customers include leading Chinese OEMs such as BYD, NIO, XPeng, Li Auto, GAC Aion, SAIC, Changan, and Geely, as well as global automakers like Tesla, Volkswagen, BMW, Mercedes-Benz, Hyundai, etc.

The global Passenger Car Charging Inlets market size was estimated at USD 542.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 12.70% during the forecast period.
