Abstracts

A passenger car differential is a mechanical component within the drivetrain system that enables the wheels on an axle to rotate at different speeds, particularly during turns, while transmitting engine torque to both wheels. This function is critical for maintaining vehicle stability, reducing tire wear, and ensuring smooth handling by allowing the outer wheel to travel a greater distance than the inner wheel when cornering. Differentials can vary in design, including open, limited-slip, locking, and electronically controlled variants, each offering distinct performance characteristics suited to different driving conditions and vehicle types.

The global Passenger Car Differential market size was estimated at USD 13400.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.50% during the forecast period.
