Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Tyres competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Tyres are essential components of a vehicle, typically made from rubber and reinforced with fabric or steel, mounted around the wheels to provide contact between the vehicle and the road surface. They serve several critical functions: offering traction and grip, absorbing road shocks for passenger comfort, supporting the vehicle's load, maintaining directional control, and ensuring effective braking. In racing and high-performance applications, tyres are engineered with specialized compounds, tread designs, and structural reinforcements to meet extreme requirements such as high speed, intense heat, rapid cornering, and varying surface conditions. The performance of a tyre can significantly influence acceleration, handling, fuel efficiency, and safety, making it a vital aspect of both competitive motorsport and everyday driving. The tyre market is a mature yet continuously evolving segment within the global automotive industry. It includes a wide range of product categories such as passenger car tyres, commercial vehicle tyres, and specialty tyres for motorsports, agriculture, and off-road applications. Technological advancements are driving innovation in areas such as durability, fuel efficiency, and noise reduction. The motorsport tyre segment, though niche, is highly specialized and plays an influential role in testing and promoting cutting-edge technologies that eventually filter down to consumer-grade products. Major manufacturers often collaborate closely with racing teams to develop custom tyre compounds and tread patterns suited to specific track conditions. Additionally, sustainability and recycling initiatives are gaining importance across the sector, reflecting the broader environmental priorities of the automotive industry.

The global Tyres market size was estimated at USD 181688.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
