### Report Overview

Sensors are being used in automobiles since 1960s and they have undergone an array of developments with the increasing requirements of the automobile owners. The increasing safety concern among passenger car owners is the key drivers for the passenger car sensors market. Passenger car sensors are mainly used in powertrain, chassis and body control where they monitor temperature, pressure, currents, vacuum and other related factors.

Now, many more engine parameters are actively monitored and controlled in real-time. There are about 20 to 50 that measure pressure, temperature, flow, engine speed, oxygen level and NOx level plus other parameters at different points within the engine. All these sensor signals are sent to the ECU, which has the logic circuits to do the actual controlling.
