## Abstracts

A Passenger Vehicle Driver Monitoring System (DMS) uses in-cabin sensors, primarily cameras and sometimes other sensors like infrared or steering wheel sensors, to monitor the driver's state and behavior in real-time. It detects signs of drowsiness, distraction (e.g., looking at a phone), and other potentially unsafe driving behaviors. The system can provide warnings to the driver, and in more advanced systems, it can even trigger interventions like lane keeping assist or adaptive cruise control adjustments. The goal is to enhance safety by mitigating risks associated with driver fatigue and inattention. The industry trend for passenger vehicle DMS is one of rapid growth and increasing sophistication, driven by a growing emphasis on safety and the development of advanced driver-assistance systems (ADAS). Key trends include:

- Integration with ADAS and Autonomous Driving Features:** DMS is becoming a crucial component of advanced ADAS and even higher levels of autonomous driving. It is used to ensure driver readiness to take back control in conditional automation scenarios and to monitor driver engagement during partial automation.
- Enhanced AI and Machine Learning:** Advancements in AI and machine learning are enabling more accurate and nuanced detection of driver states. This includes detecting subtle signs of drowsiness, cognitive load, and emotional states that could affect driving performance.
- Personalization and User Experience:** DMS is being used to personalize the driving experience by adjusting vehicle settings based on driver preferences and detected states. For example, the system could adjust climate control or music based on driver stress levels.
- Focus on Privacy and Data Security:** As DMS collects sensitive data about the driver, there is increasing focus on privacy and data security. Automakers are implementing measures to protect driver data and ensure compliance with relevant regulations.
- Expansion to Mass Market Vehicles:** While initially found in luxury vehicles, DMS is becoming increasingly common in mass-market cars, driven by decreasing costs and increasing consumer demand for safety features.
- Multimodal Sensing:** Future DMS are likely to

incorporate multimodal sensing, combining data from cameras, infrared sensors, steering wheel sensors, and even biometric sensors to provide a more comprehensive understanding of the driver's state.

The global Passenger Vehicle Driver Monitoring System market size was estimated at USD 814.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.70% during the forecast period.
