Abstracts

PMOLED simply forms a matrix with cathodes and anodes, and lights up the pixels in the array in a scanning manner. Each pixel operates in a short-pulse mode to emit high-brightness instantaneously. The advantage is that the structure is simple, which can effectively reduce manufacturing costs. However, the high driving voltage makes PMOLED unsuitable for large-size and high-resolution panels. It is different from the current development. PMOLED is not suitable for displaying dynamic images because the response speed is relatively slow, but it is very energy-saving. PMOLED does not require TFT as a substrate, low production cost, low mold opening cost, mature production process, grayscale, resolution, and image quality performance controlled by current. Products are mainly monochrome and multicolor, mostly concentrated in low-resolution and small-size markets, suitable for customized product development. At present, the development of PMOLED has reached a mature stage and has become a conventional display method, which can be flexibly applied to various industries. At the same time, the demand for PMOLED in various industries is also changing with the development of the times. The initial stage of its development coincides with the period when MP3 is widely used, so the demand for PMOLED products in the downstream market is strong. From 2014 to 2018, the outbreak of smart wearable products, mainly bracelets, also promoted the development of the industry. In 2020, the new crown epidemic will spread globally, and the main growth point of PMOLED is reflected in the medical and health field. In the future, with the development of 5G/AIoT, the expansion of household appliances and smart home, medical health, industrial control instruments and other markets is expected to drive the small screen market represented by PMOLED to develop again.

The global Passive Matrix Organic Light Emitting Diode market size was estimated at USD 7083.0 million in 2025 and is projected to grow at a compound annual growth rate

(CAGR) of 10.10% during the forecast period.
