## Abstracts

Often deemed the "first generation" of smart textiles, passive smart textiles are those that have functionality beyond that of a traditional woven textile. However, let it be known that passive textiles generally do not adapt as a result of the information they sense. In other words, the textile is not altered when environmental conditions change. Take for example, a cooling fabric that can help to regulate your temperature; but it does not actively provide coolness. The fabric simply helps you to evaporate liquid more quickly due to the construction of the textile. The same goes for apparel and other goods with UV protective, antimicrobial, and conductive/anti-static nanotechnologies. The factor driving the growth of the smart textile market is the growing demand for smart textiles in the sports and fitness industry. Sports and fitness applications that use smart textiles include smart apparel, footwear, and accessories. They have various advantages, including measuring physical activity, monitoring vital signs, and providing haptic feedback. The increasing need for sports and fitness items as people become more health conscious is likely to fuel demand for smart textiles in the sports and fitness industry.

The global Passive Smart Textile market size was estimated at USD 833.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 11.30% during the forecast period.
